

About

Gwinnett Clean & Beautiful's mission is to Connect People & Resources for a Sustainable Gwinnett, with our guiding principles of championing and supporting environmental education curriculum and programs as a key to encouraging positive behaviors and daily actions toward a healthier environment and a more-livable community. GC&B does so through building and sustaining broad based community partnerships and alliances to achieve results and long-term community improvements.

Activity

Think about ways you can reduce plastic bottles from ending up in landfills as well as find other materials they could be recycled into.

Check out this video!

Life Cycle of Plastic Water Bottle

Each day in the US, more than 60 million plastic water bottles are thrown away with most ending up in landfills or incinerators. That's over 22 billion a year! Additionally, millions litter our streets, parks and end up in our precious waterways.

Recycling plastic bottles is the most responsible action we can take because they are manufactured into new bottles, carpet, clothing and more; creating jobs, boosting our economy while saving Mother Earth!

Think About It

How many plastic water bottles are disposed of every day in the US?

How many years will it take a water bottle to biodegrade in the landfill?
