

# Careers in Water Resources: Making a Difference in Your Community

*Presented by The Water Tower and Gwinnett County Department of Water Resources*

Water is one of the more important substances on Earth. Without it, humans, plants, and animals could not survive. Simply put, no water = no life.

Gwinnett County has become a hotspot for water innovation. The Gwinnett Department of Water Resources manages and maintains the publicly owned water, sewer, and stormwater infrastructure for the rapidly growing population and provides clean water for Gwinnett County at an excellent value. The Water Tower builds upon Gwinnett County's reputation as an innovator in the water sector to help water and wastewater utilities become more progressive through applied research, technology demonstration, workforce development, and community engagement.

No matter what your interest may be - science, engineering, math, the outdoors, mechanics, problem solving, and many more – there is a position in the water industry where you can use those skills to succeed. Learn more about these organizations and what the water industry has to offer via the resources below!
